

MoV Full Name	Reported and Intended Behavior Scale
MoV Short Name	RIBS
Relevant Goal Impact Indicator(s)	Social Behaviour
Relevant for age ranges	18 and over
Summary about MoV (including information about screening, monitoring, pre/post etc.)	The 8-item RIBS can be used to assess and track mental health discrimination from the public. Various studies have proven the significance and high prevalence of discrimination that mental health service users experience. The focus of RIBS is to measure and track discrimination.
Administration notes & Scoring Instructions (plus any links to scoring templates?; who best to administer)	This measure is administered as a self-report Link to administration and scoring: http://www.indigo-group.org/wp-content/uploads/2020/05/10InstructionsforUsingtheRIBS.doc
Summary scoring and interpretations (e.g., expected output from scores and what they will tell you)	RIBS items 5-8 are scored on an ordinal scale (1-5). Items in which the respondent strongly agrees with engaging in the stated behavior have a value of 5 while individuals who strongly disagree that they could engage in the stated behavior receive 1 point. The total score for each participant is calculated by adding together the response values for items 5-8. 'Don't know' is coded as neutral (i.e., 3) for the purposes of determining a total score. As items 1-4 only calculate the prevalence of behaviors and respondents may or may not have engaged in those behaviors, they are not given a score value.
