

<b>MoV Full Name</b>	<b>Social Connectedness Scale-Revised</b>
MoV Short Name	SCS-R
Relevant Goal Impact Indicator(s)	Social Connectedness
Relevant for age ranges	12 years and older
Summary about MoV (including information about screening, monitoring, pre/post etc.)	This 20-item scale is used to assess the extent to which persons feel connected to others in their surrounding social area. It is on a likert scale with 1 being strongly disagree to 6 being strongly agree.
Administration notes & Scoring Instructions (plus any links to scoring templates?; who best to administer)	The scale is a self-report instrument  Link to scoring: Lee, R.M., Draper, M., & Lee, S. (2001). Social connectedness, dysfunctional interpersonal behaviors, and psychological distress: Testing a mediator model. <i>Journal of Counseling Psychology</i> , 48, 310-318.
Summary scoring and interpretations (e.g., expected output from scores and what they will tell you)	On the basis of the factor analysis, the SCS-R consists of all 20 original items (10 positive and 10 negative). The negatively worded items are reverse scored and summed together with the positively worded items to create a scale score with a possible range from 20 to 120. An item mean score with a possible range from 1 to 6 can also be calculated by dividing the total scale score by 20 (or the number of scale items). Higher scores on the SCS-R reflect a stronger sense of social connectedness.
Versions/ Related Measures	The measure has been translated into 15+ languages. There are also other versions as demonstrated below:  15-item version of the scale: Lee, R. M., Dean, B. L., & Jung, K. R. (2008). Social connectedness, extraversion, and subjective well-being: Testing a mediation model. <i>Personality and Individual Differences</i> , 45(5), 414-419.  Modified 'Connectedness to Parents' version: <a href="http://jea.sagepub.com/content/early/2010/09/02/0272431610376249">http://jea.sagepub.com/content/early/2010/09/02/0272431610376249</a>
Limitations	
Developer Disclaimer	There is no separate scoring or interpretation manual. There also is no recommended cut-off score as the scale should be used as a continuous variable. Use of this measure requires permission from the authors
